

Valtra Introduces Cleaner, Quieter, Cooler A Series Tractors

The popular and versatile Valtra® A Series tractors now feature new engines that run cleaner, quieter and cooler. The three-cylinder and four-cylinder Tier 3 emissions compliant engines are not only environmentally friendly, but are also more fuel efficient and are biodiesel friendly as well. While the new A Series tractors retain their very cost effective nature, with a basic mechanical fuel injection system and two- and four-wheel drive models, operators will find a driver's armrest with joystick controls as standard.

The new Tier 3 engines feature an air-to-air inter-cooler and a new, smaller and more efficient air filter located above the radiator. The new design ensures that both cooling systems receive the maximum amount of fresh air for more complete fuel combustion and reduced emissions. The 3.3-liter, 3-cylinder equipped A72 produces 74 engine horsepower. The 4.4-liter, 4-cylinder equipped A82 and A92 produce 94 and 101 horsepower, respectively.

All three A Series models utilize the fully synchronized 12F+12R transmission with mechanical forward/reverse switch. With three ranges and four main gears, including creeper gears, this proven transmission offers Valtra customers a high degree of dependability and efficiency. The optional HiShift button-operated clutch control makes A Series tractors even more loader friendly, eliminating the need to depress the clutch pedal when shifting gears or direction.

New SnowSport™ Down Pressure Strap

ACI (Agri-Cover, Inc.) announces the release of the all new SnowSport™ Down Pressure Strap. This innovative strap, when used with any SnowSport™ Utility Plow, maintains constant down pressure on the blade, which enhances scraping action of the plow when situations demand it.

The SnowSport™ Down Pressure Strap works great on concrete, blacktop, and pavers to easily remove hard, compacted snow with your truck, SUV, ATV/UTV, or Zero-Turn mower. It can be used year-round and is perfect for landscaping projects that require dirt, pea gravel, or leaves to be moved, yet still remains turf-friendly! The SnowSport™ Down Pressure Strap is a great addition to any SnowSport™ Utility Plow and is quick and easy to install. The SnowSport™ Down Pressure Strap Features:

- Rip-stop webbed fabric straps
- Heavy-duty buckles • Quick and easy installation
- Adapts to all types of snow/weather conditions

New AGCO LTs Power Up With B100 Approved Tier III Engines

Heavy-duty, mid-range AGCO® LT Series tractors are now Tier III compliant with more power, even better fuel efficiency and B100 use approved. The AGCO LT85A and LT95A tractors combine the versatility of utility tractors and the rugged engineering of high-horsepower row crop tractors. The new

models are also equipped with the most advanced semi-powershift transmission available, high flow hydraulics and a rear end built to handle one of the highest hitch lift capacities in the mid-range market. In addition to more power, the tractors feature a new look with a single piece hood that can be raised up and out of the way for easier servicing.

The heart of the new tractors is the advanced B100 approved, 4.4L SisuDiesel engine with its common rail fuel injection system and Electronic Engine Management. It delivers 85 PTO hp to the LT85A and 95 PTO hp to the LT95A. The four-cylinder engine with its four valve per cylinder design delivers the performance of a six-cylinder engine with greater economy in a more compact package. Design of the head produces improved control of air and fuel mix for a better burn. Fuel consumption is lowered with high efficiency even at high power. The engine block itself has been designed to improve temperature equalization for less stress on components and longer engine life.

The new LTs are equipped with the Auto 4 semi-powershift transmission with 16 speeds forward and reverse. The multi-function shuttle allows the operator to change direction, declutch and powershift speeds with his left hand, keeping the right hand free to implement control.

The new LTs also come with 26 gpm open center hydraulics as standard equipment. This high flow rate for an open center system is more than adequate for quick loader response.

Lower link sensing on the 3-pt. hitch with lift capacity of 7,817 lbs. standard and 9,189 lbs. optional also sets the LT Series apart from the competition.

Sixteen Hitches-In-One Revolutionizes Towing

Everyday tasks just got easier for farmers, ranchers, contractors and everyone who tows thanks to Boxer Hitch, a unique time-saving towing tool that fits all towing needs, at all heights.

Known as "16 hitches-in-one", Boxer Hitch enables workers to switch trailers or any towable in 10 seconds flat - without changing balls or hitches and no tools required. With three different-size balls mounted simultaneously, a simple turn of the dial easily changes the ball. Boxer Hitch stands out because it also features a unique pin slot for towing farm implements, and instantly adjusts to six different heights.

Boxer Hitch is tested to 14,000 lbs., class 4+, black powder coated, and made of solid steel construction. This new favorite of all who tow multiple trailers and implements is made in the U.S.A. and 100 percent backed by the manufacturer.

Ready Welder II

The Ready Welder II is the most powerful, portable, affordable, and versatile MIG welder in the world. Designed for use with typical car batteries, the Ready Welder II operates from 12DCV, 36DCV, delivering as much 350 amps of current. With two 12V batteries in series, the Ready Welder can penetrate 1/2" steel for a strong, professional weld. With a built in gas diffuser and integrated gas line, the Ready Welder II enables you to weld stainless steel and aluminum. With the Ready Welder II universal design and patented wire feed technology, it can also be used as a spool gun with most CC or CV MIG welders.

Its portability and versatility make the Ready Welder II an ideal product for off-road enthusiasts, mobile maintenance, farmers and ranchers, working marine vessels, or just about anyone anywhere. It's now easy to bring the welder to the job, then the job to the welder. The Ready Welder II weighs less than 18 lbs. in its rugged carrying case and is priced under \$400.

New MLT 735 Multi-Purpose Telehandler From Manitou

Manitou North America is pleased to announce the addition of a new model to the "Evolution" series of multi-purpose telehandler models. The MLT 735 replaces the previous MLT 634 and MLT 741 units. The 735 combines the best features of its predecessors and incorporates many new additional features. These features include an EPA Tier III compliant engine, the new "Evolution" cab, paint, and decal scheme. Other value added benefits include an improved light package, improvements to the air conditioning system and the addition of the new JSM Joystick. This model continues the tradition of Manitou presenting the most comprehensive and effective solutions to the requirements of agricultural and multi-purpose material handling applications.

Perkins engines continue to be featured in the entire range of MLT products. The new Tier III engines incorporate advanced technologies like common rail fuel injection systems, and computer management, both designed to specifically reduce the amount of particulate emissions as set forth by EPA regulations. The load sensing hydraulic system on the MLT 735 remains unchanged, providing infinitely progressive functions on all hydraulic functions. The new patented JSM (joystick switch & mow) joystick mounted on the armrest is an ergonomic, multi-functional extension of the operators arm.

All models are now equipped with new work lights and road lights. In addition, the MLT 735 "Evolution" will also include an external toolbox and a new decal scheme.
